

DocuSign eSignature for Certified EHRs

Streamline patient admission workflow with DocuSign

Digitalization of the manual patient intake paperwork process enables patients, employees and clinicians to save time, lower costs, reduce errors and create an all-around easier experience. Patients need flexibility, accessibility features and conveniences to complete necessary forms, HIPAA releases and consents. With DocuSign eSignature for Certified EHRs, patients can digitally fill out intake paperwork anywhere. Once completed electronically, these documents will be automatically uploaded into the Electronic Health Record (EHR) or your document management solution.

Simplify patient admissions with automated workflows

DocuSign eSignature for Certified EHRs, powered by Kno2's Interoperability as a Service™ capabilities, improves the patient or legal representative experience by providing a touchless digital admissions process. Any provider with a certified EHR that includes DirectTrust Direct Secure Messaging (DIRECT) can leverage DocuSign's partnership with Kno2 to automate patient intake paperwork, HIPAA releases and consents. Preparing intake packets, signing the patient forms and storing the signed forms via your EHR and DocuSign can all occur seamlessly and digitally. By automating the patient intake process, your staff will reduce their administrative burden, attain documents quicker and be able to spend more time with patients.

DocuSign eSignature increases the reliability, integrity, availability and authenticity of records and signatures. DocuSign technology allows customers to electronically sign documents in compliance with ESIGN, UETA and HIPAA regulations. DocuSign is ISO 27001:2013 certified—the highest level of global information security assurance available today—and utilizes a robust architecture that delivers high availability and enables access on nearly any device from almost anywhere. All documents and data are encrypted in transit and at rest. Each DocuSign eSignature transaction includes a fully traceable, tamperproof audit trail and exportable certificate of completion.

Leverage interoperable solutions to spend more time with patients, not processes

Starting with the personalization of the intake packet, an EHR user can add patient demographic data to the DocuSign envelope within the DocuSign eSignature interface. Future releases may enable the user to send information from the EHR patient record into DocuSign. The provider can electronically send the admission packet to a designated email address or take the digital forms to a patient's bedside to complete on an electronic tablet. The signature workflow happens entirely within DocuSign, which is a solution that is easy to use and familiar to most patients.

Upon completion of the admission packet by the patient, the signed forms are submitted to Kno2 for efficient filing at the designated endpoint of the patient/resident record in your EHR. The filing process steps can include:

- Completed admission documents automatically sent directly to a patient's chart in the EHR, either with or without a manual review in the Kno2 interface
- Automated matching to the correct patient record in the EHR through the Patient ID match or an integrated patient lookup in Kno2
- Automated assignment of individual forms in the admission packet to the corresponding EHR document type

Simple. Efficient. Secure.

Send a patient admissions packet through a DocuSign envelope

Patient digitally completes and signs patient admissions packet remotely or at bedside with an iPad

DocuSign hands off to Kno2 for review for automated filing into EHR

The DocuSign Agreement Cloud

The DocuSign Agreement Cloud lets you focus on your patients and get reimbursed faster by simplifying many processes that require forms, signatures and notes. It automates and connects end-to-end workflows to help providers do more with less, accelerate revenue and deliver the modern experiences every stakeholder expects. DocuSign helps over 1,800 healthcare providers achieve outstanding results, including agreements that contain 88% fewer errors, get completed 21 days faster and cost \$36 less per agreement compared to manual agreements.

Beyond the partnership with Kno2, the DocuSign Agreement Cloud provides several solutions that meet critical needs in the healthcare industry.

eSignature

Securely send and sign documents in person, offline or digitally and maintain a complete audit trail.

Integrations

In addition to the DocuSign eSignature for Certified EHRs, DocuSign offers over 350 pre-built integrations with the leading platforms where healthcare work is done, including Salesforce, ServiceNow, Microsoft, and Smartsheet, plus HR, Credentialing and Contracting solutions.

PowerForms

Generate on-demand self-service documents for signature in a secure and user-friendly experience.

ID Verification

A digital way to verify government-issued IDs.

Payments

During the signing process, collect payment via credit card, Apple Pay, Google Pay, or ACH electronic payments.
